

Metalogix Archive Manager - SharePoint Edition

SharePoint Archiving Software Solution

Metalogix Archive Manager - SharePoint® Edition uses its HSM (hierarchical storage management) to direct all files to more cost effective storage media. It also removes duplicates, using single instance storage, leaving you less to back up. Using Microsoft EBS (external BLOB storage) technology, it replaces the original BLOB (binary-large-object) content with a pointer to HSM that is only 150-200 bytes. Archive Manager - SharePoint Edition is able to reduce the growth of the SharePoint content databases by 99%.

You can use Archive Manager - SharePoint Edition to define automatic archiving processes. When needed, authorized users can select documents from within the MOSS interface and archive them directly. With Archive Manager - SharePoint Edition, a few clicks restores the original documents. Save time and ensure the end user has as little downtime as possible.
