

Metalogix Migration Manager for SharePoint – SharePoint Management Benefits

Manage SharePoint sites, structures, and content on-premises or in the cloud

Whether you are re-organizing your SharePoint content, migrating between SharePoint servers, or upgrading from SharePoint 2003 or 2007 to SharePoint 2010, Metalogix Migration Manager for SharePoint is an easy-to-use and convenient way to manage your SharePoint data. With its familiar copy-and-paste-style user interface, you can manage all your SharePoint sites, libraries, lists, web parts and permissions between servers, while preserving metadata and document versions. It also lets you reorganize and re-template sites, lists and libraries during the process. With deep PowerShell integration in Migration Manager, SharePoint administrators can script and automate migration and content management tasks for complete automation. Because it uses only fully-supported Microsoft methodologies and APIs, it does not affect existing Microsoft support agreements.

KEY FEATURES

▶ **Fastest Full Fidelity Migration**

Migration Manager for SharePoint gives you the flexibility to maximize the potential of your hardware. Using sophisticated performance improvements, the latest version of Migration Manager for SharePoint will scale up performance as you increase the available resources.

▶ **Workflow Support**

Migration Manager for SharePoint supports migrating out of the box, SharePoint Designer, and Nintex workflows.

▶ **Microsoft Approved, Supported, Safe**

Metalogix Migration Manager for SharePoint is the only SharePoint migration and management product that has passed both the security and performance criteria set by Microsoft to be approved for installation on Office 365 dedicated servers. We work closely with Microsoft's teams as they provision and configure your Office 365 dedicated environment. We can also guide you through the install process including both the documentation and test results as required by Microsoft prior to deployment in the Microsoft data centers.

▶ **Support for SharePoint Online**

Migration Manager for SharePoint supports scenarios where content is stored in any hosted SharePoint environment.

▶ **Easy to Use**

Migration Manager for SharePoint allows you run your operations from an intuitive, Windows Explorer-style, graphical interface utilizing a familiar tree view and copy-and-paste actions.

▶ **Migrate All List Types**

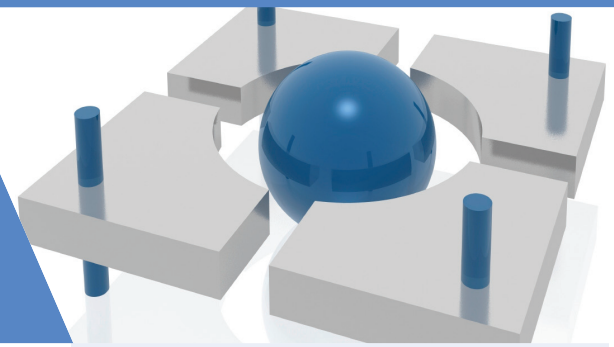

Migration Manager for SharePoint can copy Document Libraries, Issues, Tasks, Contacts, Announcements, Discussions and Custom Lists.

▶ **Work Remotely**

Do all the heavy lifting for your SharePoint reorganization from the convenience of your own machine. Migration Manager for SharePoint connects to any SharePoint site that you can access with your browser – even those hosted outside your organization.

▶ **Retain Your Valuable Data**

Migration Manager for SharePoint preserves views, version chains, metadata, and user-edit information.

BUSINESS BENEFITS

- Flexibly manage your existing content and take full advantage of the cost savings of an ideal information architecture.
- Maximize your investment in existing business-critical content with a high-fidelity management solution.
- Save significant time by managing content between SharePoint environments on-premises or hosted in the cloud.

IT BENEFITS

• **Performance**

Migration Manager for SharePoint offers unmatched migration speed.

• **Flexibly copy SharePoint Sites, Lists and Libraries between servers with full fidelity.**

Empower end users and administrators to organize their content at the item, list, site or site collection level. Preserve permissions, versions, views and metadata as you restructure your data.

• **Manage SharePoint 2007, or 2010 in a shared cloud, hybrid cloud, or Office 365 dedicated or shared.**

Work directly with WSSv2, SharePoint Portal Server 2003, WSSv3, and 2010 SharePoint using Microsoft supported APIs and the only solution approved by Microsoft for Office 365 dedicated.

• **Reorganize or re-template sites to take advantage of new features.**

Re-define your site structure. Split sites and site collections into multiple targets and re-template sites. Administrators and content owners can define which content is reorganized.

• **Synchronize between on-premises and SharePoint in the cloud.**

Connect to multiple SharePoint servers and schedule incremental update operations.

NEW IN THIS VERSION

- Nintex workflows
- Significant performance improvements
- Microsoft exclusive approval for Office 365 Dedicated

SUPPORTED SOURCE SYSTEMS

- Office 365 and SharePoint cloud environments
- SharePoint Portal Server (SPS) 2003
- Windows SharePoint Services (WSS) v2
- Microsoft Office SharePoint Server (MOSS) 2007
- Windows SharePoint Services (WSS) v3
- SharePoint Server 2010
- SharePoint Foundation 2010
- BPOS Dedicated (BPOS-D) and Shared (BPOS-S)

▶ **Migrate Permissions**

Migration Manager for SharePoint maps and migrates site permissions from WSSv2/SPS 2003, WSSv3/MOSS 2007 or SharePoint 2010 to Office 365 Dedicated easily.

▶ **Migrate Web Part Content**

Migration Manager for SharePoint migrates out-of-the-box and custom web part content from WSSv2/SPS 2003, WSSv3/MOSS 2007 or SharePoint 2010 to Office 365 dedicated.

▶ **Connect to Multiple Sites**

Migration Manager for SharePoint allows you to connect to multiple SharePoint sites, across any number of servers, to consolidate or reorganize your SharePoint data easily.

▶ **Batch Your Work**

Migration Manager for SharePoint can batch multiple operations for convenience and re-run them at any time. You can easily run your migrations at night and view the results and logs in the morning. Once a job is created, use a PowerShell script to customize or execute it along with other administration processes.

▶ **PowerShell Enabled**

With the rich PowerShell integration in Migration Manager for SharePoint, administrators can easily script even the most complex operations and fully automate jobs through an intuitive user interface. Metalogix Migration Manager for SharePoint is the first SharePoint solution to allow users to capture any migration or content management task as a reusable script, which can then be customized using the flexibility and richness of PowerShell.

▶ **Compliant**

We work closely with Microsoft to employ only supported best practices and we do not use any unsupported methods such as directly writing to the SharePoint database. Run operations only through the supported SharePoint APIs. This ensures Microsoft support agreements are not voided.

▶ **Distribute the Workload**

Use Migration Manager for SharePoint to delegate and distribute migration efforts to individual departments or content owners. This reduces IT workload, enhances buy-in, speeds up the adoption of the new system, and improves decision making as your content can be reorganized to reflect current business needs. You can manage a distributed workload because Migration Manager for SharePoint reads and writes only through the supported SharePoint APIs, respecting the security trimming of the content. Content owners simply need read access to their source sites, along with write access to the new target locations.

▶ **Compare Your Data**

Compare data between environments or between SharePoint versions easily with Migration Manager for SharePoint's powerful differential reporting capabilities. Compare content between a live site and QA, or between a backup file and the live SharePoint site, to see instantly what has been added, modified or deleted.

▶ **Deploys Simply and Quickly**

Migration Manager for SharePoint takes only minutes to install and requires only the .Net Framework (Version 2.0). No dedicated server is required.

▶ **On-going Management of SharePoint**

Get control of 'SharePoint sprawl' with Migration Manager for SharePoint's extensive content management features. Reorganize, re-template and improve your information architecture every day.
