

## Metalogix Migration Manager for SharePoint - eRoom Edition

Migrate any eRoom content types to SharePoint through a familiar tree-to-tree user interface

Metalogix Migration Manager for Microsoft SharePoint® - eRoom Edition simplifies the process of migrating eRoom content to SharePoint, including SharePoint 2010 when available. As all interactions with eRoom and SharePoint go through supported remote APIs, you can complete all migration operations from any client machine. In addition, eRoom objects can be migrated at the item level or at the site level. Metalogix Migration Manager for SharePoint - eRoom Edition preserves metadata for all items and migrates them to SharePoint.

### KEY FEATURES

#### ▶ Easy to Use

Metalogix Migration Manager for SharePoint — eRoom Edition has a tree-based user interface with copy-and-paste functions, similar to the familiar Windows File Explorer.

#### ▶ Migrate All Types of eRoom Content

Migrate all eRoom content objects with SharePoint Migration Manager for SharePoint - eRoom Edition:

- Folders
- Files
- Links
- Discussions
- Notes
- Polls
- Calendars
- eRoom databases

#### ▶ Retain Your Valuable Data

SharePoint Migration Manager for SharePoint - eRoom Edition preserves metadata and user-edit information with:

##### • Version Histories

SharePoint Migration Manager for SharePoint - eRoom Edition converts eRoom version histories to SharePoint version histories for migrated content. You can also choose to migrate only the most recent version of each eRoom item.

##### • Users and Permissions

eRoom users and permissions can be mapped and migrated to SharePoint using either default or customized mappings.

#### ▶ Work Remotely

Do all the heavy lifting for your Stellent-to-SharePoint migration from the convenience of any client machine. Metalogix Migration Manager for SharePoint — eRoom Edition connects to any SharePoint site or eRoom server that you can access with your browser — even those outside your organization's intranet.

#### ▶ Batch Your Work

Batch multiple list migration operations for convenience and re-run them at any time. Run your migrations at night and view the results and logs in the morning. Once a job is created, use a PowerShell script to customize or execute it along with other administration processes.

### BUSINESS BENEFITS

- Consolidate your content to SharePoint, while preserving content and metadata.
- Re-organize eRoom content in SharePoint as you migrate, or move existing content all at once.
- Move as much or as little eRoom content to SharePoint as you wish.

### KEY BENEFITS

- Migrate all types of eRoom content while preserving all metadata and user-edit information and version histories.
- Map and migrate all eRoom users and permissions to SharePoint using default or customized mappings.
- Connect to multiple eRoom and SharePoint sites across any number of servers to consolidate or distribute your data easily.
- Do all the heavy lifting from the convenience of any client machine.
- Batch all migration operations for convenience; run your migrations at night and view the resulting migration logs in the morning.
- All migration activity is done through the supported SharePoint and eRoom APIs.
- Identify which eRoom items might cause invalid SharePoint URLs prior to migration.

## SUPPORTED SOURCE SYSTEMS

- Any eRoom deployment or version that includes the eRoom XML API

### ▶ **Compliant**

We work closely with Microsoft to employ only supported best practices and we do not use any unsupported methods such as directly writing to the SharePoint database. Run migration activity only through the supported SharePoint APIs.
