

Metalogix Migration Manager for SharePoint - Website Edition

Accelerate your migration to the SharePoint web content management platform

If your organization is moving to the Microsoft SharePoint® 2007 or SharePoint 2010 web content management platform for streamlined website authoring, workflow and publishing, Metalogix Migration Manager for SharePoint - Website Edition will get you there faster.

By automating many of the arduous tasks traditionally associated with a website migration, such as generating lists of URLs, copying and pasting snippets of HTML, and correcting links, Migration Manager for SharePoint - Website Edition will save your team from undertaking a time-consuming and labor-intensive manual migration.

KEY FEATURES

▶ **Crawl and Inventory Your Site**

The first step in a website migration is knowing what you have. Metalogix Migration Manager for SharePoint - Website Edition allows you to quickly generate a complete list of all the HTML pages and related resources on your site. Crawl static sites and enterprise content management systems such as: Vignette, Interwoven, IBM, Tridion, and Stellent as well as many other third-party or home-grown systems.

▶ **Analyze Your Content**

Powerful filtering, sorting, and visualization tools allow you to identify the important aspects of your existing website. Discover all of your content types, page templates, and site hierarchies.

▶ **Map Site Hierarchies**

Your existing site hierarchy can be mapped to your new site hierarchy within Migration Manager for SharePoint - Website Edition, or you can choose to auto-generate the target hierarchy based on your existing one.

▶ **Extract and Map HTML Regions**

Extract all key HTML regions from within your HTML pages, such as titles, abstracts, bodys and images using a powerful, visual tagging tool. A single extraction rule can be re-used across thousands of similar pages.

▶ **Manage Links**

Save hundreds of hours of post-migration, manual content cleanup. Migration Manager for SharePoint - Website Edition allows you to automatically correct all links within migrated HTML content.

▶ **Migrate Related Images and Documents**

Related resources such as images and documents can be migrated along with HTML pages, and copied to an image or document library within SharePoint.

▶ **Deploys Simply and Quickly**

Takes only minutes to install and requires only the .Net Framework (Version 2.0). No dedicated server is required.

BUSINESS BENEFITS

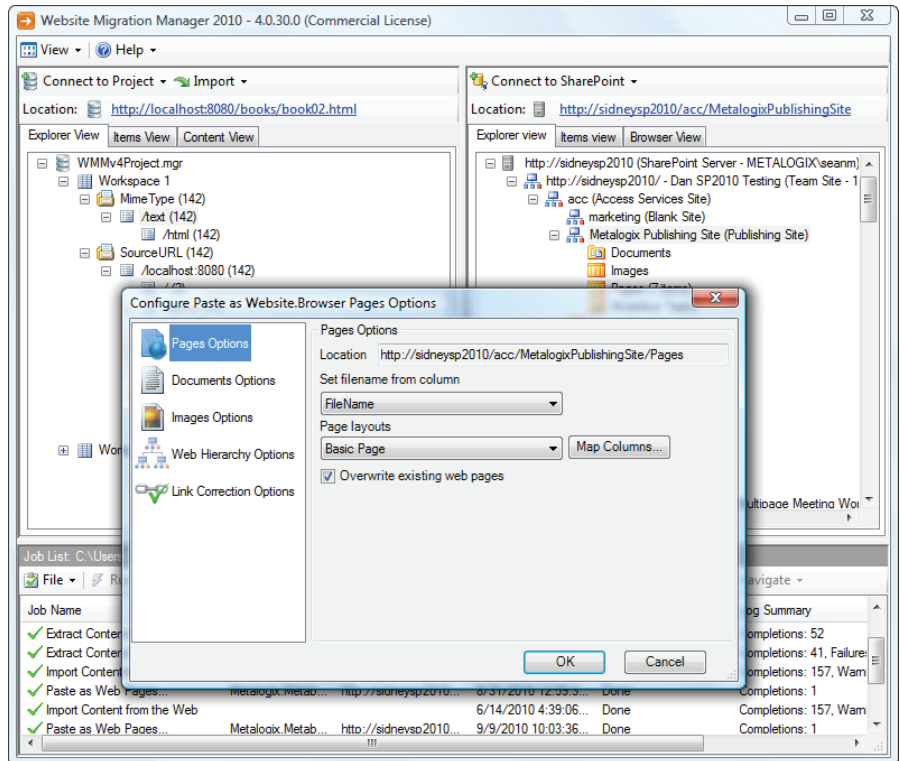

- Reduce migration costs by up to 90%
- Maximize your investment in existing website and document content
- Accelerate the process of moving to the SharePoint 2007 or 2010 web content management platform
- Avoid a labor-intensive, time-consuming, manual website migration
