We want to hear from you. Send any comments regarding this document to support@metalogix.com.

The level of technical support provided depends upon the support package that you have purchased. Contact us to discuss your support requirements.

Archive Manager Version 7.3 Release Highlights

New feature	Why it is important
ArchiveWeb grid optimized for displaying large datasets rapidly	In the Archive Web interface, users can choose to load results into a “simple grid” which will quickly return data for the current page. This grid is not supported to display search results.
Ability to purge data from decommissioned servers in Files Edition	Files on decommissioned Archive Manager servers can be purged to free up space.
Files Edition can support for long file paths over 260 characters	Archive Manager Files Edition can now archive files that have a path length up to up to 4000 characters. This feature is not supported in Oracle environment.

Support for search across multiple Exchange Edition search servers	For large environments, where multiple Archive Manager servers are required for a scalable implementations, a search can now be done across several servers.
Exchange Edition archiving job optimized by converting from MAPI to Exchange Web Services (EWS)	Exchange Web Services provides a more stable and scalable service to perform heavy operations with, especially for more recent versions of Exchange. The Archiving job will now utilize EWS instead of MAPI.
Actions and operations in ArchiveWeb are now performed asynchronously on folders to prevent interface from not responding or timing out	To perform operations like legal hold, tagging, and retention upon files, Archive Manager will now make asynchronous calls. The operation will be able to finish in the background while the user can continue to use the ArchiveWeb interface.

268832	OWA2010: Unable to archive	
265184	OWA 64bit setup password issue	137025

Upgrade Notes

Only upgrades from Archive Manager 7.2 are supported. If more Metalogix Archive Manager products are present or use the same components in a distributed architecture, all have to be updated to the same version. Because of database model changes in version 7.3, database upgrade can take a considerable amount of time. Full database backup before the upgrade is strongly recommended.

Support Notes

As per Metalogix Service Level Agreement, only last two released versions of a software product are supported. This means only Metalogix Archive Manager 7.2 and Metalogix Archive Manager 7.3 are supported. Metalogix may support older versions of software products when possible as a professional service. Contact your sales representative for further information.

End of Support Notice

Metalogix Archive Manager Exchange Edition, Metalogix Archive Manager Files Edition and Metalogix HSM do not support installation on Windows Server 2003 (all versions), Windows Server 2008 (all service packs) and Windows Server 2008 R2 without Service Pack. Windows Server 2008 R2 SP1 is the minimal version supported by Metalogix Archive Manager Exchange Edition, Metalogix Archive Manager Files Edition and Metalogix HSM 7.3.

Metalogix Archive Manager Exchange Edition no longer supports Microsoft Exchange 2003 and Microsoft Outlook 2003.

According to the Microsoft Lifecycle Policy, the support for Exchange Server 2007 ends on 11. April 2017. We highly recommend that all customers migrate to a supported Exchange version.

Please refer to System Prerequisites document for more details.
